

19mm TOE ADJUSTMENT WRENCH 88-8350

This unique tool is designed to set the toe adjustment for front alignment on General Motors "J" cars, Chevrolet Cavalier, Cadillac Cimarron, Buick Sunbird and Oldsmobile Firenza, from 1982 and later. This wrench turns the adjustment bolt on the tie rod which then changes the toe setting during the alignment process. A long 1/2 inch drive extension snaps on this special 19mm wrench allowing the toe adjustment to be made from the side of the car. Made from heat treated steel, this tool comes in a black finish.
